

H26 round 1 (2026-10-04). Top: median loop gain $g = 1 - 1/VR$ down the field-removal ladder for content, activity, talk (10 regime-III two-room units).

Middle: per-unit drive-removed gains, joint day-bootstrap 95% CIs (diamonds: one-room units, L2 upper bounds). Bottom: synthetic validation.

Reading: content's room excess (~ 0.5) is real but activity's is as large at matched resolution; H01's 0.74 is reproduced by drives alone (S1-S4).
