

H23 synthetic validation at village sample sizes (200 simulations per point)

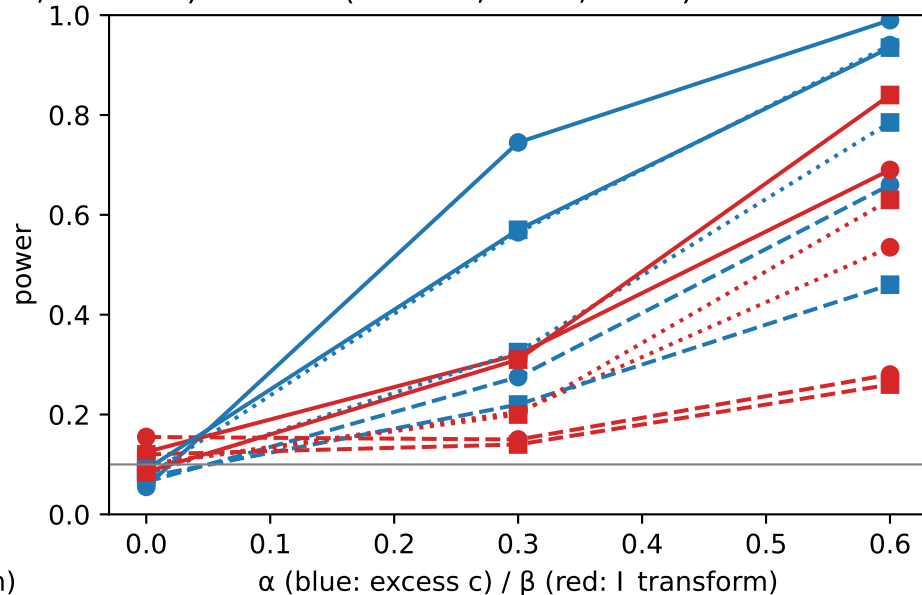

A. corpus → leader plan channel

acts, coder 0.6; $\square$ 3 classes, 0.68; $\triangle$ 10 acts, perfect; -- n=16, — n=70

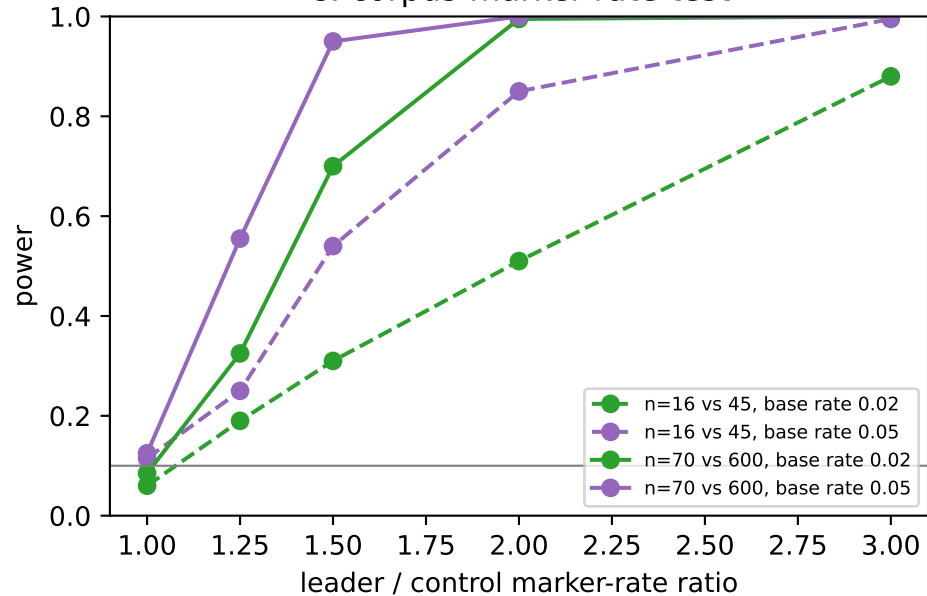

B. conversational channel (context → response)

(-- n=16, $\cdots$ 45, — 70)

C. corpus-marker rate test

D. embedding $d = \cos(z, \bar{C}) - \cos(z, \bar{K})$
