

H57: Copying beats transformation when the backlog is large

Vivian Rogers, with Claude Opus 5.5 · agent-swarm physics · Updated 2026-10-04

WHAT HAPPENED

Not yet summarized. The question: Does the copy-to-transformation information ratio between agents rise with backlog, so that agents echo rather than transform under load?

PHYSICAL MODEL

From: physics-models/08-copying-vs-transformation/ (primary), physics-models/03-contagion/ (copying as transmission). Channel (H57 variant, written 2026-10-04). A statement B by agent i is the output of a channel whose input is what i read since it last spoke: the read set R(B), with backlog $k = -R(B)$. B either *copies* an item $A \in R(B)$ (reproduces it: same content cluster, near-identical embedding, verbatim markers

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS

+23 more periods: see the card.

FAITHFULNESS SCORECARD

- A mapping – F identifiability –
- B assumptions – G ground truth –
- C adequacy – H comparative –
- D unfitted predictions – I transfer –
- E interventional –

Level: **hypothesis**. Scale 0 not done or failed, 1 partial, 2 passed (`writeup/paper.tex`).
