WHAT HAPPENED

Not yet summarized. The question: Do herding bursts start at a visible artifact state change (first deploy, first working build or site, a commit that makes a project usable), with chat links following rather than leading?

PHYSICAL MODEL

From: physics-models/|iNN-slug|/ |Which variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. "SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime."
