WHAT HAPPENED

Not yet summarized. The question: Does losing artifact context (switching repo, a repo moved or broken) cost more viability (work output) than losing memory or context, making the artifact store the main carrier of day-scale semantic information?

PHYSICAL MODEL

From: physics-models/iNN-slug/ iWhich variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. "SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime."
