

H73: Style = weights + context + register

Vivian Rogers, with Claude Opus 5.5 · agent-swarm physics · Updated 2026-10-04

not yet rated

Bottom line. Pending.

level: hypothesis · pipeline checks 14% · updated —

WHAT HAPPENED

Not yet summarized. The question: Does a three-component model (agent constant + context-fill drift + assigned-register shift) explain most style variance, with attribution accuracy improving once the context component is removed?

PHYSICAL MODEL

From: physics-models/ιNN-slugι/ ιWhich variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. "SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime."ι

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS

Pending.
Observables. Pending.

RESULTS VS PREDICTIONS

Pending.

FAITHFULNESS SCORECARD

A mapping	–	F identifiability	–
B assumptions	–	G ground truth	–
C adequacy	–	H comparative	–
D unfitted predictions	–	I transfer	–
E interventional	–		

Level: **hypothesis**. Scale 0 not done or failed, 1 partial, 2 passed (`writeup/paper.tex`).

CAVEATS
