

H26: The swarm is near-critical in what it says but subcritical in when it acts

Vivian Rogers, with Claude Opus 5.5 · agent-swarm physics · Updated 2026-10-03

WHAT HAPPENED

Not yet summarized. The question: H01’s content-level $\beta J_0/n$ (median 0.74, an upper bound) sits far above every activity loop gain (≤ 0.4). If that survives proper multi-direction field removal (the H24 lesson), ideas can cascade even when activity can’t. *Check:* drive-removed content loop gain vs activity gain in the same windows; idea-cascade sizes (HH122). Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL

From: 11, 01. The round-1 agent specifies the exact variant.

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS

Pending.
Observables. Pending.

RESULTS VS PREDICTIONS

Pending.

FAITHFULNESS SCORECARD

A mapping	–	F identifiability	–
B assumptions	–	G ground truth	–
C adequacy	–	H comparative	–
D unfitted predictions	–	I transfer	–
E interventional	–		

Level: **hypothesis**. Scale 0 not done or failed, 1 partial, 2 passed (`writeup/paper.tex`).

CAVEATS

Pending.
