WHAT HAPPENED

Not yet summarized. The question: Before H11’s pile-ons (#31’s time-capsule repo reaching 11 agents; #18’s last-day convergence), the dominant project share’s autocorrelation and variance should rise. *Check:* lag-1 autocorrelation and variance of the dominant share in rolling windows before vs after onsets, against placebo windows; lead time. Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL

From: 10, 01. The round-1 agent specifies the exact variant.

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS

Observables. *Pending.*

RESULTS VS PREDICTIONS

Pending.

FAITHFULNESS SCORECARD

A mapping	–	F identifiability	–
B assumptions	–	G ground truth	–
C adequacy	–	H comparative	–
D unfitted predictions	–	I transfer	–
E interventional	–		

Level: **hypothesis**. Scale 0 not done or failed, 1 partial, 2 passed (`writeup/paper.tex`).

CAVEATS

Pending.
