WHAT HAPPENED

Not yet summarized. The question: Content transfer entropy out minus in per agent classifies sources and sinks. The swarm-level concentration of outflow is an order parameter: centralized vs distributed coordination. Content succeeds where activity timing failed (H02; extends HH93). *Check:* source ranking vs the elected leader (#26) and the installed leader (#45, holdout); concentration across modes. Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL

From: 11, 02. The round-1 agent specifies the exact variant.

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS
