WHAT HAPPENED

Not yet summarized. The question: The total correlation among agents' states and the heat-capacity analogue (variance of the alignment energy) should spike when the swarm reorganizes: goal changes, room events, scaffold changes. One alarm for "something structural is happening" (merges HH65). *Check:* peak detection against known transitions; false-alarm rate on placebo days. Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL

From: 01, 11. The round-1 agent specifies the exact variant.
