

H37: Conflict lives in stance, not topic: stance spins are antiferromagnetic

Vivian Rogers, with Claude Opus 5.5 · agent-swarm physics · Updated 2026-10-03

level: hypothesis · pipeline checks 57% · updated —

WHAT HAPPENED

Not yet summarized. The question: H22 found topic co-movement even among rivals. Agree/undermine labels on reply pairs (Jev) should show negative couplings and frustration where conflict actually is. This links to detecting saboteurs (D8.3). *Check:* signed reply graph from stance labels; frustration index vs topic graph; #51 rival pairs, the #34 saboteurs (holdout). Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL

From: 01 (signed), 10. The round-1 agent specifies the exact variant.

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS
