WHAT HAPPENED

Not yet summarized. The question: H02’s collective co-activation is partly everyone going quiet together. That is a common field (API outages, scaffold restarts), not coupling. *Check:* joint-silence bins vs simultaneous errors or latency spikes across agents in actions. Does Curie–Weiss βJ_0 vanish after conditioning on them? Practical aim (usefulness-first batch): produce a number or rule an operator of an LLM agent swarm could compute from logs and act on.

PHYSICAL MODEL
