

H01 · ideological order (D3.1.a) and coupling vs field (D3.2)

Exploratory round 1, non-holdout only (holdout untouched). AI Village data (AI Digest). Unit = goal period split at step changes; bge-small statements, per-regime whitening n = 32, k = 40 meaning clusters.

	prediction (locked)	outcome	verdict
P1	rooms below random on >= 60% of days AND median dH <= -0.1 nats	96% of 54 days < 0 (p<.05 on 74%); median -0.098	not met (size; direction strong)
P2	labs below random; removing h_i shrinks lab dH >= 50%, room dH < 50%	labs 93% < 0, median -0.073; shrink labs 13%, rooms 33%	failed
P3	room JSD day-to-day < null 5th pct on >= 60% of day pairs	14% of 95 pairs; median null pct 0.32	failed
P4	#8 polarization along g-hat high, #21 lower	#8 0.267 vs #21 0.268 (ranks 11, 10 of 24)	not as predicted
P5	fields explain >= 60% of a_ij variance in >= 2/3 of units	12/16 units; median R2 0.76 vs rotation null 0.75	met by the letter; null-level
P6	exposure slope > 0 in >= 2/3 units, RE > 0 at p < .01; both directions; within > cross	12/15 > 0; RE +0.0131 (p=0.019; rot p=0.005); dirs p=0.0003/0.0044; rooms 12/12	not met (RE p > .01)
P7	merge: new pairs' residual rises vs stay; GPT-5 no rise (direction)	DiD +0.178 (perm p=0.004); GPT-5 cut arm -0.081	as predicted (confounded)
P8	triplet: g-alignment ~ incumbents; high mutual; residual with incumbents rises	no statements while isolated; post-merge 07-09: mutual 0.25-0.47 (inc. q90 0.28); residual w/ incumbents below inc-inc, rises only by 07-16/17	not estimable as designed
P9	beta*J0 < 0.5 n in every unit, h carries the order	median beta*J0/n 0.74; 34/41 units >= 0.5 (upper bound: co-fluctuation is within rooms)	failed

Headline: rooms are reliably MORE ordered than random groups (96% of days), but the effect is just under the pre-registered size; it is largest where rooms got different instructions (#38, #44: a room field). Coupling evidence: small positive exposure slope (+0.013/e-fold, p = 0.02; instrument-sensitive), a strong merge DiD (+0.18), and day-to-day co-fluctuation that lives inside rooms. The mean-field coupling bound is large (P9 failed), so 'order is mostly field' is not supported.
