WHAT HAPPENED

Not yet summarized. The question: Do elected and installed leaders show high content inflow and reply centrality but low outflow, so that leadership in agent swarms is aggregation rather than broadcasting?

PHYSICAL MODEL

From: physics-models/*i*NN-slug*i*/ *i*Which variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. "SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime."*i*
