WHAT HAPPENED

Not yet summarized. The question: Do restatement loops start when the agent’s context fills with its own recent output above a threshold, and end at erasure or when novel input arrives?

PHYSICAL MODEL

From: physics-models/*i*NN-slugs/ *i*Which variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. ”SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime.” *i*
