level: hypothesis · pipeline checks 14% · updated —

WHAT HAPPENED

Not yet summarized. The question: Does a multi-channel change-point monitor combining H36’s topic shift, H56’s log features (event mix, tool schemas, stylometry) and the schedule/outage signals recover documented NEs and find undocumented ones (NE40, NE45, NE43’s two steps) at a low false-alarm rate?

PHYSICAL MODEL

From: physics-models/ iNN-slug/ iWhich variant of that model this hypothesis uses, its parameters, and what it predicts here. E.g. ”SIS with spontaneous adoption field ϵ ; λ , γ , ϵ fit per regime.” i

SO WHAT? PRACTICAL VALUE FOR UNDERSTANDING AGENT SWARMS

Observables. Pending.

RESULTS VS PREDICTIONS

Pending.

GOAL PERIODS IN DETAIL

No goal-period folders yet.

FAITHFULNESS SCORECARD

A mapping	–	F identifiability	–
B assumptions	–	G ground truth	–
C adequacy	–	H comparative	–
D unfitted predictions	–	I transfer	–
E interventional	–		

Level: **hypothesis**. Scale 0 not done or failed, 1 partial, 2 passed (`writeup/paper.tex`).

CAVEATS

Pending.

ROUND 2
